

Mohammed Ayman Musabeh

Senior Full Stack Developer | Backend Architecture, Laravel & PHP

Deir al-Balah, Palestine | Open to Remote Roles (GCC & International) | +970 597 669 248
mhmd.musabeh@gmail.com | github.com/phpMuhammed

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience designing, building and scaling production web platforms, specializing in Laravel and PHP backend architecture with full stack delivery ownership. Spent four years building the backend behind **iStoria**, an English-learning product for the Saudi and Arabic-speaking market that now serves **over 5,000,000 learners**, and has since delivered marketplace and B2B platforms across the GCC and Palestine. Strong in system design, RESTful API design, Domain-Driven Design (DDD), SOLID principles and Test-Driven Development (TDD), with hands-on depth in MySQL, PostgreSQL, Redis caching, queue management and query optimization. Experienced with regional payment and engagement providers (HyperPay, Twilio, Firebase, MoEngage) and bilingual Arabic/English product delivery. Known for end-to-end technical ownership, code review and mentoring within Agile teams.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer (Vibe Coder Engineer) | One Studio

June 2024 - July 2026 | Multi-project product engineering team | linkedin.com/company/onestudio-co

- Delivered **multiple client-facing products** as part of the One Studio engineering team, taking features from requirements and system design through implementation, review and release.
- Pioneered an **AI-assisted development workflow** (Cursor AI, Claude AI, GitHub Copilot) paired with disciplined engineering practice — accelerating delivery while holding the line on architecture, test coverage and code quality.
- Acted as a senior technical voice in **code review, technical documentation and mentoring**, raising consistency and standards across shared Laravel codebases.
- Worked in **Agile/Scrum** using **Jira**, converting **Figma** design handoffs into production frontend and API work alongside product stakeholders in Arabic and English.

Flagship project — Darent | Saudi property booking & short-term stay platform | ~8 months

darent.com | linkedin.com/company/darent

- Built backend functionality for a **Saudi marketplace platform** covering property listings, bookings and short-term stays — a domain with heavy availability, pricing and transactional complexity.
- Integrated **HyperPay** for regional online payments and **Twilio Verify** for OTP authentication, plus **Firebase** and **MoEngage** for notifications and user engagement.
- Delivered a fully **bilingual Arabic/English experience** with **Spatie Translatable** and rich property media handling via **Spatie Media Library**, meeting GCC-market requirements including RTL content.
- Implemented **search with Laravel Scout**, background processing with **Laravel Queues and Scheduler**, and production observability with **Laravel Telescope**.

Backend Developer | iStoria - English-Learning Platform

2020 - 2024 | Consumer ed-tech serving the Saudi & Arabic-speaking market

istoria.sa | linkedin.com/company/istoria-app

- **Four years of continuous backend ownership** on the platform that grew into one of the largest English-learning products in the region — today used by **over 5,000,000 learners**.
- Architected and maintained the **Laravel/PHP backend and RESTful API layer** powering the consumer mobile and web clients, covering learner accounts, content delivery and progress tracking.
- Designed the **relational data model** in **MySQL/PostgreSQL** and evolved it safely across four years of feature growth through disciplined **migrations, indexing and query optimization** — with zero tolerance for downtime on a live consumer user base.
- Kept response times stable as traffic scaled by orders of magnitude using **Redis caching strategies, queue-driven background processing** and targeted **performance optimization** of hot read paths.
- Implemented **authentication, authorization and rate limiting** (Laravel Sanctum) to secure a high-volume public API against abuse.
- Delivered **bilingual Arabic/English content handling** and media-heavy lesson delivery, working to the localization and RTL expectations of Saudi and wider Arabic-speaking users.
- Applied **OOP, SOLID principles and design patterns** plus **PHPUnit/Pest** test coverage to keep a long-lived codebase maintainable and safe to change across four years and many release cycles.
- Balanced **continuous feature delivery against production stability** for millions of active users — the defining engineering constraint of the role.

Backend Developer | CapTab - Pharmacy Management Platform

2023 - Present | B2B SaaS, built alongside full-time engagements

new.captabapp.com

- Designed and built an **offline-first pharmacy management platform** now used by **70+ independent pharmacies** across Palestine and the region, owning it end to end from data modeling and backend architecture through to API and admin interfaces.
- Engineered the **offline-first architecture and data synchronization model** that lets pharmacies keep trading through unstable connectivity and power outages, then reconcile cleanly once back online — the platform's core technical differentiator.
- Applied **Domain-Driven Design, SOLID principles and design patterns** to keep a business-critical domain (inventory, sales and operations) maintainable as the customer base grew.
- Built **RESTful APIs** in Laravel with **Sanctum** authentication and role-based authorization via **Filament Shield**, delivering operational back-office panels with **FilamentPHP**.
- Protected stock- and revenue-critical logic with **TDD** using **Pest PHP** and **PHPUnit**, backed by **Redis caching, queue management** and **database indexing** for responsiveness in the field.

CORE TECHNICAL SKILLS

Architecture & Design: System Design, Scalable Architecture, Backend Architecture, Domain-Driven Design (DDD), Event-Driven Architecture, API Design, MVC, SOLID Principles, Design Patterns, Authentication & Authorization, Rate Limiting

Backend: PHP, Laravel, Full Stack Development, RESTful APIs, OOP, Eloquent ORM, Laravel Sanctum, Queues, Scheduler, Scout, Telescope, FilamentPHP, Filament Shield, Spatie Media Library, Spatie Translatable

Databases & Performance: MySQL, PostgreSQL, Database Design, Data Modeling, Query Optimization, Indexing, Migrations & Seeders, Redis, Caching Strategies, Queue Management, Performance Optimization, Scalability

Testing & Quality: Test-Driven Development (TDD), Pest PHP, PHPUnit, Unit / Feature / Integration Testing, Code Review

Frontend, DevOps & Tools: JavaScript, HTML5, CSS3, Bootstrap, Vite, Git, GitHub, Nginx, Composer, Postman, Jira, VS Code, Figma design handoff, Cursor AI, Claude AI, GitHub Copilot

Integrations & Ways of Working: HyperPay, Twilio Verify, Firebase, MoEngage, Payment Gateway Integration, Agile/Scrum, Mentoring, Technical Documentation, Problem Solving, Stakeholder Communication

EDUCATION

Bachelor of Science in Software Engineering

Islamic University of Gaza | Graduated 2019

LANGUAGES

Arabic: Native **English:** Professional working proficiency — effective written and verbal communication with technical teams and business stakeholders in both languages.
